

CILL OPTIONS

A cill is recommended. It is the most reliable and effective system for directing water away from the building. Choose the cill that fits your aperture. We have 4 cill size variations: 127.5mm, 150.5mm, 177mm and 225mm.

NOSE CHANNEL PRESSING

ALTERNATIVE OPTIONS

Channel pressings are alternative options from cills. They're not as reliable as cills but they do direct water away from the building.
